

Installation of Nessus (Possible Errors)

To get an activation key **Nessus** will not accept Gmail account (any personal Email account), you need an institute mail id to get an activation key.

Error: “parameter architecture does not match system (amd64)”

Solution: Download and install **amd64** version of Nessus (available just above the i386 version).

Error: If your network uses proxy server then you may face problem when you open <https://kali:8843>.

Solution: Add your user name (for ex. kali in our case) in **ignore host section** as shown below.

```
localhost;127.0.0.1;*.iitkgp.ac.in;  
*.iitkgp.ernet.in, kali
```
